

MIM — Augmented | IAE Business School

MIM — Augmented | IAE Business School

Objective

Industry 4.0 — driven by data, connectivity, and artificial intelligence — is changing how value is created and how decisions are made. For managers, AI is quickly becoming the most powerful lever available to improve judgment, speed, and execution, both at the company level and in their own day-to-day work.

This course takes a hands-on approach. You will work directly with state-of-the-art tools that leaders are already using to augment their teams and their decisions, and you will discuss the real challenges of adoption: data quality, cultural resistance, ethical trade-offs, and separating hype from value.

By the end of the program, you will leave with a clearer view of where AI creates real business value, a practical toolkit you can apply immediately, and a new way of thinking about your own productivity as an augmented leader.

Because the future will not belong to companies that simply use AI. It will belong to the managers who are augmented by it.

Industry 4.0 — The 8 Stages

Industry 4.0 is not a one-time project — it is a continuous journey of digital evolution. The eight stages below are the backbone of the course narrative; each class session maps to one or more of them.

Step	Focus	Goal
1	Assessment	Know where you are — map current processes, technology, and digital maturity, identify gaps, and define baseline KPIs.
2	Strategy	Know where you're going — set a clear vision aligned with business goals, prioritize

Step	Focus	Goal
		high-ROI use cases, and secure leadership buy-in.
3	Connectivity	Connect everything — deploy IoT sensors, modern networks, and secure data platforms to capture reliable real-time data.
4	Integration	Break data silos — integrate ERP, MES, and SCADA systems so information flows seamlessly across the value chain.
5	Analytics	Turn data into insight — apply Big Data, AI, and ML to predict, optimize, and support better decisions.
6	Automation	Let machines do more — use cobots, digital twins, and autonomous systems to boost efficiency, safety, and quality.
7	People	Bring humans along — reskill teams, redesign workflows, and build a culture of innovation and continuous learning.
8	Scale	Grow and improve — scale successful pilots, monitor KPIs, and evolve continuously with partners and new technologies.

Class Agenda

7 sessions · mix of presential (3.5 h) and virtual (2 h). **Each day has its own mission and tool focus. Days 1-2 build the Atlas mission in Cowork; the Days 3-4 sessions are still to be defined.**

Schedule

#	Date	Time	Format	Duration	Title
1	Sat Aug 1		Presential	3.5 h	

#	Date	Time	Format	Duration	Title
		8:30 – 12:00			Getting Started with Claude Cowork
2	Sat Aug 1	13:00 – 16:30	Presencial	3.5 h	Automating a Weekly Report in Cowork
3	Thu Aug 6	19:00 – 21:00	Virtual	2 h	<i>To be defined</i>
4	Tue Aug 11	19:00 – 21:00	Virtual	2 h	<i>To be defined</i>
5	Fri Aug 28	9:00 – 12:30	Presencial	3.5 h	Cowork for the Enterprise
6	Sat Aug 29	8:30 – 12:00	Presencial	3.5 h	Orchestrating Agents with Paperclip
7	Thu Sep 3	19:00 – 21:00	Virtual	2 h	Evaluation

Track narrative Days 1–2 (the Saturday double session) build the full Atlas mission in Cowork — from framing and project setup to a self-running report, email, and live dashboard. Days 3–4 run their own missions (to be defined). Day 5 packages your work into plugins others can install across an organization. Day 6 orchestrates a team of agents in Paperclip, with a human in the loop. Day 7 is the course evaluation.

Day-by-Day

DAY 1 — Assessment & Strategy: Getting Started with Claude Cowork ● COWORK FOUNDATIONS

Sat Aug 1 · 8:30 – 12:00 · Presencial · 3.5 h · Tool introduced: Cowork

GOAL

Build a shared mental model of Industry 4.0 and AI as a management lever, internalize the shift from chatting to delegating, learn the Cowork interface, and set up the foundations you'll build on — Instructions, Projects, the Markdown/metadata that configures everything, and the Connectors/MCP that reach the outside world.

I4.0 PHASE MISSION

Assessment & Strategy (Steps 1–2)

UNLOCKS

TOOLS

SESSION FLOW

TAKEAWAYS

Atlas — see the Atlas Mission appendix (Milestone 1 begins: Project + Instructions)

Instructions · Projects · MD/metadata · Connectors/MCP (concepts)

Claude Cowork

→ Industry 4.0 framing — where companies actually are vs. where they think they are (25 min) → The three surfaces of Claude (Web/Chat · Claude Code · Cowork) + the chat→agent paradigm shift: “stop typing one message at a time, start delegating a result” (25 min) → Live Cowork demo — interface tour on the real app (mode selector, folder picker, Scheduled and Live artifacts tabs); delegate a multi-step task and watch it plan, touch files, and deliver (40 min) → The Cowork building blocks map — the stack you’ll assemble across the track (Instructions · Projects · Skills · Connectors/MCP · Schedule · Live Artifacts), with Plugins as the cross-cutting distribution layer (15 min) → Instructions & Projects — set the agent’s “work contract” and give it a fixed home; scaffold the Atlas Project pointed at your folder (35 min) → MD & metadata — the LLM lingua franca: nearly everything you configure (Instructions, Skills, agents) is plain Markdown, and a metadata header tells the system what a file is and when to use it (20 min) → Connectors & MCP — the agent’s “hands”: connect external services (Drive, Gmail, market data) in one click, with MCP as the open standard behind them (30 min) → Team formation + preview of the 4 milestones (15 min)

✓ The chat→agent paradigm: you deliver a result and guide it instead of typing every step. ✓ A map of the Cowork building blocks you’ll assemble across the track. ✓ The Atlas Project scaffolded, with Instructions — including the golden rule: never gives investment advice.

✓ How Markdown/metadata configures everything, and how Connectors/MCP let Cowork reach your external tools.

DAY 2 — Connectivity → Scaling: Automating a Weekly Report in Cowork ● THE FULL ATLAS LOOP (Milestones 1-4)

Sat Aug 1 · 13:00 - 16:30 · Presencial · 3.5 h

GOAL

Build the full Atlas loop end to end — from the intern's messy raw notes to a report Atlas researches, drafts, emails, and publishes on its own — wiring the Cowork building blocks into one automated loop.

I4.0 PHASE

Connectivity → Integration → Automation → Scaling (Steps 3-8, condensed)

MISSION

Atlas (continued from Day 1) — see the Atlas Mission appendix

UNLOCKS

Skills · Schedule · Live Artifacts (using Day 1's Connectors/MCP)

TOOLS

Claude Cowork + MT Newswires & Gmail connectors

SESSION FLOW

→ **Skills** — “anything you explain to Claude twice is a Skill you should write once”: build the reporte-semanal Skill; the two ways to create a Skill in Cowork and the **Save trap** (its SKILL.md is Day 1's MD/metadata in action) (45 min) → **Research with Skills + connectors** — build buscar-accion so Atlas gathers its own prices and news, using the MT Newswires connector set up on Day 1 plus web search (40 min) → **Schedule** — make Cowork proactive: a Monday-8:00 task that runs the loop and leaves a Gmail draft; the local-only caveat (the app must be open) (40 min) → **Live Artifacts** — share the result: the pulso-semanal dashboard that refreshes with current data in the Live artifacts tab (local, not shareable yet) (40 min) → **The full loop + governance** — how the pieces chain end to end; Cowork has no audit trail, every output is a

MILESTONE

draft, never feed it sensitive/regulated data (25 min)
Wire the whole Atlas loop on top of Day 1's Project + Instructions: the **reporte-semanal Skill** (consolidates a week's fuentes/ into a fixed-template report), the **buscar-accion Skill + MT Newswires/Gmail connectors** (Atlas finds its own prices and news and drafts the email), a **Monday-8:00 Schedule** (it runs itself), and the **publicar-tablero Skill** that updates the pulso-semanal **Live Artifact**.
Success: Atlas produces the report from data it found itself, leaves a Gmail draft, and refreshes a Live Artifact dashboard — the two deliverables the boss asked for, on autopilot.

TAKEAWAYS

✓ Hands-on with the building blocks that make Atlas run: Skills, Schedule, Live Artifacts. ✓ The full delegation loop — from raw notes to a self-running report + dashboard. ✓ The governance limits: Cowork has no audit trail and every output is a draft.

DAY 3 — *To be defined*

Thu Aug 6 · 19:00 – 21:00 · Virtual · 2 h

Mission and content to be defined.

DAY 4 — *To be defined*

Tue Aug 11 · 19:00 – 21:00 · Virtual · 2 h

Mission and content to be defined.

DAY 5 — Workforce Transformation & Scaling: Cowork for the Enterprise ● PLUGINS · CLAUDE TAG · TEAM

Fri Aug 28 · 9:00 – 12:30 · Presencial · 3.5 h

GOAL

Cross the line from building for yourself to Claude working across your whole team: amplify your own work with Subagents, package and distribute workflows as Plugins, bring Claude into the team's Slack as

I4.0 PHASE

TOOLS

SESSION FLOW

MISSION

a shared teammate with Claude Tag, and see what a Claude Team account unlocks for an organization.

Workforce Transformation & Scaling (Steps 7-8)

Claude Cowork (Subagents · Plugins · marketplaces) · Claude Tag · Claude Team plan

→ Recap: the building blocks you've stacked so far — Skills, Connectors, Schedule, Live Artifacts (10 min) → **Subagents (brief)** — amplify your own work: delegate heavy or noisy sub-tasks to isolated agents that run in parallel and report back a summary (20 min) → **Plugins** — package a full workflow (Skills + agents + connectors) into one installable unit; install from a marketplace, in Chat and Cowork; the Team/Enterprise lifecycle (an Owner's private marketplace, ZIP or GitHub sync, per-plugin install preferences) (40 min) → **Claude Tag** — Claude as a shared teammate: tag @Claude in a Slack channel to delegate tasks; one instance serves the whole channel (multiplayer), builds persistent memory over the conversation, can take ambient initiative and run async tasks, with tool/data access scoped per channel (beta for Team/Enterprise) (35 min) → **The Claude Team account** — why an organization adopts it: shared Projects and knowledge, native workplace connectors (Drive, Gmail, Calendar, M365, Slack, GitHub), enterprise search, per-member usage limits, centralized admin/billing/SSO, and Claude Code included per seat (25 min) → **Mission** (50 min) → Debrief: what did you make reusable, and who could use it? (15 min)

Turn what you built into something others can use. Package one of your workflows (e.g., the Atlas Skills from Days 1-2) into a **Plugin**, publish it to a marketplace, and have a teammate **install and run it** in their own Cowork — proving it works on a

TAKEAWAYS

machine that isn't yours. As a stretch, set an install preference as if rolling it out to a whole team.

Success: someone else installs your plugin and reproduces your result without you touching their setup.

✓ The shift from personal automation to shared, org-wide AI. ✓ How Plugins package workflows for others, how Claude Tag makes Claude a shared teammate in Slack, and what a Team account unlocks. ✓ How a Team/Enterprise Owner distributes and governs capabilities across the organization, in both Chat and Cowork.

DAY 6 — Continuous Improvement & Scaling: Orchestrating Agents with Paperclip ● PAPERCLIP

Sat Aug 29 · 8:30 – 12:00 · Presencial · 3.5 h

GOAL

Take the delegation mindset one level up: instead of guiding a single agent, add a specialized agent to an existing organization of agents and steer it toward a goal — while a human stays firmly in the loop through approval gates and budgets. Meet Paperclip, an open-source framework for exactly that.

I4.0 PHASE

Continuous Improvement & Scaling (Step 8)

TOOLS

Paperclip (open-source agent orchestration)

→ From one agent to an organization — recap the arc: Chat → delegating a result (Cowork) → orchestrating a team of agents toward a goal (25 min) → What Paperclip is — an open-source control plane that assigns goals to a hierarchy of AI agents (Claude Code, Codex, Cursor) with a human operator at the top; tour the pre-built organization (25 min) → Human in the loop, by design — approval gates for sensitive actions, per-agent token budgets (soft warning → hard stop), and a circuit breaker for abnormal spend: you

SESSION FLOW

MISSION

watch progress against goals, not every call (25 min) → Mission — add and run a new specialized agent (35 min) → Debrief + course close — where this is heading and where human judgment still matters (10 min)

The organization already exists in Paperclip — your job is to **add one new specialized agent: a “Director of Institutional Relations.”** Give it a clear mandate: **analyze the potential risks** facing the institution and, as mitigation, **produce awareness content — e.g. blog posts** — that gets ahead of them. Wire it into the existing org, hand it the goal, set a token budget, and drive it by **approving the key steps** (which risks to prioritize, which content to publish). **Success:** the new agent produces a risk read plus at least one awareness blog draft, and every sensitive step passed through your approval.

✓ How to extend an existing agent organization with a new specialized role. ✓ How the delegation model scales from one agent to an orchestrated team. ✓ Why human-in-the-loop controls (approval gates, budgets, circuit breakers) are what make autonomy safe.

TAKEAWAYS

DAY 7 — Evaluation

Thu Sep 3 · 19:00 – 21:00 · Virtual · 2 h

Evaluation. Format and content to be defined.

Mission Overview

Day	Type	Mission / Focus	I4.0 Phase	Tools / pieces
1	Presencial	Atlas — framing, Cowork intro, Instructions/ Projects, MD/	Assessment & Strategy	Cowork (Instructions · Projects · MD · Connectors/ MCP)

Day	Type	Mission / Focus	I4.0 Phase	Tools / pieces
		metadata & Connectors/ MCP		
2	Presencial	Atlas — full loop: report, research, automation, dashboard	Connectivity → Scaling	Cowork (Skills · Schedule · Live Artifacts)
3	Virtual	<i>Mission to be defined</i>	—	—
4	Virtual	<i>Mission to be defined</i>	—	—
5	Presencial	Enterprise — Plugins, Claude Tag & Team: make your work reusable and bring Claude to the whole org	Workforce Transformation & Scaling	Cowork (Subagents · Plugins) · Claude Tag · Team plan
6	Presencial	Paperclip — add a new agent (Director of Institutional Relations) to an existing org: analyze risks, create awareness content, human-in-the-loop	Continuous Improvement & Scaling	Paperclip
7	Virtual	Evaluation — format and content to be defined	—	—

Appendix — The Atlas Mission (Days 1-2)

Days 1 and 2 — the Saturday double session — teach Claude Cowork through one running mission: Atlas, your team’s virtual market analyst. Your boss needs a weekly pulse on three companies — **Apple**

(AAPL), Microsoft (MSFT), and Nvidia (NVDA) — delivered two ways: an **email in the inbox once a week** and an **always-updated dashboard** (a Live Artifact) he can open whenever he wants. Instead of building that report by hand every Monday, you build Atlas in Cowork to do it for you — without writing a single line of code.

Across Days 1-2 you grow Atlas through **four milestones**, each a working increment that unlocks a new Cowork building block on top of the last. The full brief lives in `mission.md`.

Milestone	What Atlas achieves	Cowork superpower unlocked
1 • Atlas is born	On-demand report: turns the intern's scattered notes into a clean weekly pulse with a fixed format	Projects • Instructions • Skills
2 • Atlas learns to research	Autonomous report: gathers news and prices on its own — no more manual copy-paste	Tools (web search) • Connectors (market data)
3 • Atlas works alone	Ready-to-send report: every Monday it leaves a draft in Gmail, ready to review and send	Connectors (Gmail) • Schedule
4 • Atlas delivers the dashboard	Live dashboard: the pulso-semanal Live Artifact refreshes itself with the latest data every week, living in the Live artifacts tab	Artifacts (Live Artifacts) • Skills
